Country of Origin I: Installation

Country of Origin I is designed for the MS-DOS operating system of the late 1980's.

It should work on most Microsoft operating systems made until now.

A separate utility which you can use to emulate a DOS-environment under Windows XP/Vista, Mac OSX and Linux is called DOSbox and can be downloaded for free at http://dosbox.sourceforge.net

DOS and all Windows versions

Download origin.zip and unzip it in a location of your choice. Unzipping the archive will create the 'origin' folder. Run the origin.exe executable that resides in this folder.

If you are working in Windows XP or Windows Vista, and the game will not work, or there is no sound, use DOSbox. Refer to the DOSbox documentation.

Mac OSX

Download origin.zip and unzip it in a location of your choice. Unzipping the archive will create the 'origin' folder.

Install DOSbox as explained in the DOSbox documentation. For the following example we unpacked the archive on the desktop.

Start DOSbox. Type the following lines, followed by returns:

```
mount c ~
c:
cd desktop\origin
origin
```

Linux, FreeBSD, OS/2, BeOS

Unzip into a directory of choice, use the appropriate version of DOSbox to emulate a DOS environment. Follow the instructions in the DOSbox documentation.
